

In the Claims

Change the claims as follows:

1. (Currently Amended) A healthy bed for nursing, which is characterized in its bed body being a reticular fabric which is woven by fiber strands and has meshes; diameters or diagonal lines of the foresaid meshes are longer than or equal to diameters of warps and wefts which are woven to make meshes and should be shorter than 30 times of diameters of warps and wefts; the foresaid fiber strands are waterproof fiber strands; joints of the foresaid warps and wefts should be fastened; the foresaid waterproof fiber strands made up of the reticular fabric can be plant fiber strands or synthetic fiber strands which are coated or soaked with waterproof glue; and to facilitate an ease of cleaning without removing a patient or baby from said bed.
2. (Cancelled)
3. (Cancelled)
4. (Cancelled)
5. (Currently Amended) A healthy bed for nursing, which is characterized in its bed body being a reticular fabric which is woven by fiber strands and has meshes; diameters or diagonal lines of the foresaid meshes are longer than or equal to diameters of warps and wefts which are woven to make meshes and should be shorter than 30 times of diameters of warps and wefts, whereas the individual strands are waterproof, yet said mesh is capable of allowing liquid and air to pass through; and to facilitate an ease of cleaning without removing a patient or baby from said bed.
6. (Currently Amended) A healthy bed for nursing for facilitating hygiene and cleanliness, which is characterized in its bed body being a reticular fabric which is woven by fiber strands and has meshes; diameters or diagonal lines of the foresaid meshes are longer than or equal to diameters of warps and wefts which are woven to make meshes and should be shorter than 30 times of diameters of warps and wefts, whereas the individual strands are waterproof, yet said mesh is capable of allowing liquid and air to pass through; and to facilitate an ease of cleaning
